SIMULATION-ZIPBOMB

The file mimics a zip bomb , there are many meaningless flags scattered across files .

the correct or intended flag is in : artifact_0042.txt of bundle 2 in src.

each flag is encrypted , You need to decode it by a base 64 decoder and take the decode value and run it through a rot13 decoder .

the flag before decryption is: `bXJlYmZycGhlcnBnc3tmdnpoeW5ndmJhX3N5bnR9`

after decryption is : zerosecurectf{simulation_flag}
